Unsubscribely

Programmable subscription payments on Algorand

5:00

DURATION

10

SEGMENTS

5

VAULT TYPES

SEGMENT 01 · THE HOOK

0:00 – 0:30

0:00 – 0:08**SCREEN ACTION** Black screen. Voice only. No app visible for first 8 seconds.

Every month, money leaves your account without a single conscious decision from you. Subscriptions you forgot. Services still charging you. And every one of those payments — not recorded anywhere you actually own. No contract on-chain. No receipt that lasts. No conditions. No agent watching for you.

0:08 – 0:30**SCREEN ACTION** Fade in the landing page. Slow scroll from hero down to Features. Pause 2s on Escrow Vault card, then Agent card.

This is Unsubscribely — a DeFi platform that puts subscription payments on Algorand. Not just tracked — governed. Locked in smart contracts with programmable release conditions. Released by an autonomous agent. Not by you manually.

SEGMENT 02 · LANDING PAGE WALK

0:30 – 1:00

0:30 – 0:43

Four layers. A subscription tracker — your entire portfolio in one place. On-chain escrow vaults — five types, each with different programmable release conditions. An autonomous payment agent — a wallet that executes payments on-chain every day. And an AI spending optimizer — risk scoring, cost-saving recommendations, portfolio analysis.

0:43 – 1:00**SCREEN ACTION** Click "Get Started". Auth screen. Log in. Wallet auto-connects to Testnet.

Let me show you the real thing.

NOTE Pre-logged in. Wallet on Algorand Testnet. 4+ subscriptions added. One locked vault, one released vault ready.

SEGMENT 03 · DASHBOARD OVERVIEW

1:00 – 1:30

1:00 – 1:18

SCREEN ACTION Pan over dashboard. Hover monthly spend metric. Scroll to subscription cards. Show billing dates and vault status.

The dashboard — full subscription footprint. Monthly spend, upcoming billing dates, active vaults, live agent activity. Four subscriptions already here — Netflix, Spotify, GitHub, Figma. Next billing dates, amounts, and vault status at a glance.

1:18 – 1:30

SCREEN ACTION Navigate to Subscriptions !' Add Subscription. Fill in: Adobe Creative Cloud · \$54.99 · Monthly · billing date 4 days out. Save.

Adding a subscription takes seconds. Any service, any currency, any billing cycle. Now watch what we do with it.

SEGMENT 04 · CREATING AN ESCROW VAULT

1:30 – 2:45

1:30 – 1:52

SCREEN ACTION Escrow Vaults !' Create Vault !' Type: Standard · Adobe CC · 5 ALGO · recipient address. Click Create. Sign transaction in wallet popup.

This is where it gets real. I'm going to lock funds inside a smart contract on Algorand. Not a database entry. Not a company's promise. An actual on-chain contract — immutable, trustless, auditable by anyone.

2:00 – 2:20

SCREEN ACTION Vault appears with App ID. Click Fund Vault. Sign. Wait for LOCKED status badge to appear.

Funded and locked. Five ALGO is now inside the smart contract. Not in my wallet. Not in anyone's database. On-chain. Immutable. Waiting for release conditions to be met.

2:22 – 2:42

SCREEN ACTION Click the Lora Explorer link. Show: contract address, App ID, inner payment amount. Hold 8 seconds. Return to app.

Look at Lora — the contract address, the amount, the ABI call. This is real. Anyone can verify it right now. [8 second pause — let the on-chain proof speak for itself.]

SEGMENT 05 · FIVE VAULT TYPES

2:45 – 3:15

2:45 – 3:13

SCREEN ACTION Create Vault modal !' cycle through each vault type in dropdown. Pause 4s on each. Show unique fields that appear for each type. Do not create any. Close modal.

Five vault types. Five programmable trust models. Standard — creator locks, agent or creator releases. Time-Locked — funds cannot move before a specific date, contract-enforced, not policy. Multi-Sig — two wallets must agree before release, ideal for business payments. Dispute-Resolution — third-party arbitrator can intervene. ASA-based — lock Algorand Standard Assets, not just native ALGO. All enforced by TEAL contracts on the Algorand Virtual Machine. No middleman. No override possible.

SEGMENT 06 · THE AUTONOMOUS AGENT

3:15 – 4:00

3:15 – 3:20

SCREEN ACTION Dashboard !' scroll to Agent Activity panel. Let it load fully. Point cursor at the ON-CHAIN badge.

This is what makes Unsubscribely different from every other subscription tracker on the market.

3:20 – 3:42

SCREEN ACTION Highlight an agent action entry. Show timestamp and amount.

There is a dedicated Algorand wallet — the agent — running every day at midnight UTC. It wakes up. Scans every subscription with a billing date that has arrived. Finds the linked escrow vault. Calls release() on the smart contract — an ARC-4 method — and ALGO moves from the vault to the recipient address. No user click. No reminder. No manual step. Autonomous, on-chain, every single day.

3:42 – 4:00

SCREEN ACTION Click the Lora link on an agent action entry. Show: agent wallet address as sender, release() ABI method call, inner payment to recipient. Hold 5 seconds. Return to dashboard.

The agent wallet signed this. Submitted it. ALGO moved to the recipient. Publicly verifiable on Lora right now — the method call, the amount, the addresses. Every autonomous action timestamped, logged, with direct on-chain proof.

NOTE If no agent action exists yet — open the locked vault detail page, show its App ID on Lora, explain the agent will autonomously release it at next billing date.

SEGMENT 07 · ARC-3 NFT RECEIPT

4:00 – 4:15

4:00 – 4:15

SCREEN ACTION Vault Details of pre-released vault !' Mint NFT Receipt !' sign in wallet !' show receipt card: name, amount, timestamp, ASA ID.

After a vault releases, mint an ARC-3 compliant NFT receipt — an immutable on-chain record of the payment. Name, amount, subscription, timestamp — all in the NFT metadata. Your payment history is not in a database someone controls. It is on Algorand. Permanently.

SEGMENT 08 · AI SPENDING OPTIMIZER

4:15 – 4:35

4:15 – 4:35

SCREEN ACTION AI Optimizer page !' Run Analysis !' wait for Gemini response !' show risk scores, recommendations, spend health score.

Locking money on-chain creates a natural audit trail — and the AI optimizer reads it. Powered by Gemini, it analyzes your full subscription portfolio. Surfaces duplicate spending, high-risk services, underused plans. Gives you a spend health score and specific recommendations — what to cancel, what to downgrade — based on actual vault data and billing patterns. Not generic advice.

SEGMENT 09 · ON-CHAIN RESUME

4:35 – 4:50

4:35 – 4:50

SCREEN ACTION On-Chain Resume page !' show resume: vault history, total ALGO paid, NFT receipt count !' briefly show the public shareable URL in address bar.

Every wallet has a public on-chain resume — shareable, verifiable view of your entire Algorand payment history. Vault count, total ALGO moved, NFT receipts minted. Anyone with the link can verify every record on-chain. Permanent. Trustless. Yours.

SEGMENT 10 · CLOSE

4:50 – 5:00

4:50 – 5:00

SCREEN ACTION Cut to landing page hero. Hold 5 seconds. Fade to black with Unsubscribely wordmark centered.

Unsubscribely. Programmable money. Transparent payments. Autonomous delivery. This is what subscription payments look like when they belong to you.

Shot-by-Shot Production Table

USE THIS DURING RECORDING — EVERY ACTION MAPPED TO THE SECOND

TIME	SCREEN	ACTION	VOICEOVER
01 — THE HOOK			
0:00	Black screen	Voice only. No visual.	"Every month, money leaves your account without a single conscious decision from you..."
0:08	Landing – Hero	Fade in. Slow scroll.	"...subscriptions still charging you. Services you forgot. Every payment — not recorded anywhere you actually own."
0:18	Landing – Features	Scroll to features.	"No contract on-chain. No receipt that lasts. No agent watching for you."
0:26	Landing – Features	Pause on Escrow card.	"This is Unsubscribely — DeFi subscription payments on Algorand. Governed. On-chain."
02 — LANDING			
0:30	Landing – Features	Hover Escrow, then Agent card.	"Four layers: subscription tracker, on-chain escrow vaults, an autonomous agent, and an AI optimizer."
0:43	Landing	Click Get Started.	"Let me show you the real thing."
0:47	Auth / Login	Log in. Wallet connects.	[Pause — no voiceover]
03 — DASHBOARD			
1:00	Dashboard	Pan over metrics.	"Full subscription footprint — monthly spend, billing dates, active vaults, agent activity."
1:10	Subscription list	Scroll to sub cards.	"Netflix, Spotify, GitHub, Figma. Billing dates and vault status visible."
1:18	Subscriptions page	Click Add Subscription.	"I'll add one more — Adobe Creative Cloud."
1:22	Add form	Fill Adobe CC · \$54.99 · Monthly. Save.	"Any service, any currency, any billing cycle."
1:28	Subscription list	Adobe CC appears. Pause 2s.	"Now watch what we do with it."
04 — ESCROW VAULT			
1:32	Escrow Vaults	Click Create Vault.	"Locking funds in a smart contract on Algorand. Not a database — an actual on-chain contract."
1:42	Create Vault modal	Standard · Adobe CC · 5 ALGO. Fill.	"Immutable, trustless, auditable by anyone."
1:52	Wallet popup	Sign transaction.	"Deploying to Algorand Testnet..."
2:00	Vault – unfunded	Hover App ID.	"Contract deployed. That App ID is its permanent on-chain address."
2:08	Vault – Fund	Click Fund. Sign. Wait LOCKED.	"Five ALGO moving into the smart contract."
2:16	Vault – LOCKED	Status flips to LOCKED.	"Locked. On-chain. Immutable. Waiting."
2:22	Lora Explorer	Click Lora link. Txn loads.	"Look at Lora — contract address, amount, ABI call. This is real."
2:32	Lora – txn detail	Show sender, app ID, inner txn. Hold 8s.	[Silence — let the proof speak]
2:42	App – Vault view	Return to app.	
05 — VAULT TYPES			
2:45	Create Vault modal	Hover type dropdown.	"Five vault types. Five programmable trust models."
2:50	Modal – Standard	Select Standard.	"Standard — creator locks, agent or creator releases."
2:54	Modal – Time-Locked	Select. Unlock date shows.	"Time-Locked — funds can't move before a date. Contract-enforced."
2:58	Modal – Multi-Sig	Select. Co-signer shows.	"Multi-Sig — two wallets must agree before release."
3:02	Modal – Dispute	Select. Arbitrator shows.	"Dispute-Resolution — third-party arbitrator can intervene."
3:06	Modal – ASA	Select. Asset ID shows.	"ASA-based — lock any Algorand Standard Asset, not just ALGO."
3:11	Modal closing	Close modal.	"All enforced by TEAL on the AVM. No middleman. No override."
06 — AGENT			
3:15	Dashboard	Scroll to Agent panel.	"This is what makes Unsubscribely different from every other subscription tracker."
3:20	Agent Activity panel	Point at ON-CHAIN badge.	"A dedicated Algorand wallet — the agent — runs every day at midnight UTC."
3:28	Agent entry	Highlight entry. Show timestamp.	"Scans due subscriptions. Calls release(). ALGO moves. No click. No reminder. Fully autonomous."
3:42	Lora – agent txn	Show agent wallet, release() call, inner payment. Hold 5s.	"The agent signed this. ALGO moved. Publicly verifiable on Lora right now."
3:54	Dashboard	Return. Agent panel visible.	"Every action — timestamped, logged, direct on-chain proof."
07 — NFT RECEIPT
