

Target Users

SEGMENT	PROFILE
Primary	Indian devs and freelancers (22-35) paying \$50-150/mo across Notion, GitHub, Cursor, Figma, ChatGPT, Adobe. Lose 5-7% to USD forex markup. Zero cancellation proof. ALGO vaults are currency-agnostic. ~5M TAM India.
Secondary	AI agent developers needing MCP protocol to manage payments without custody. MCP ecosystem growing 300% YoY.
Tertiary	SaaS providers wanting agent-discoverable on-chain listings via ServiceRegistry to reduce CAC.

Revenue Model

STREAM	PRICE	STATUS
x402 micro-payments	0.001 ALGO/call	Live
Pro Lifetime	INR 349 one-time	Live
MCP Premium	\$5/mo write+admin	Post-mainnet
ServiceRegistry	5 ALGO one-time	Post-mainnet
B2B vaults	Custom per-seat	Phase 3

"We hate subscriptions. So we won't make you subscribe to us."

Distribution Strategy

CHANNEL	MECHANISM	CONVERSION PATH
Telegram Bot	Zero-friction entry. Renewal alerts, KEEP/CANCEL buttons. Viral sharing loop.	Alert > view vault > Pera wallet > vault deployed
MCP Ecosystem	Listed on glama.ai, mcp.so. One config paste into Claude = 12 tools.	Directory > paste config > first call > token upgrade
SEO / Content	450+ cancel pages with real URLs. High-intent organic traffic.	Search > guide > CTA > free signup > Pro at 10-sub limit
AlgoBharat	Hackathon visibility. Open source contributors build on vault contracts.	Hackathon > GitHub > contributor > advocate
Product Hunt	Post-mainnet in subscription management + AI agent payments categories.	PH > landing > free signup > Pro at 10-sub limit

Monetization Hypothesis

Users get full value free (10 subs, all tracking). Revenue from two layers:

- Consumer layer:** Power users with 10+ subs pay INR 349 once for lifetime access to Telegram bot, escrow vaults, AI agent and browser cancel. One-time pricing eliminates churn.
- Machine layer:** AI agents pay per-request via x402. Payment IS authentication. More tools via MCP = more micro-revenue automatically.

Why Algorand

NEED	ALGORAND DELIVERS
Instant confirmation	3.3s finality, real-time decisions
Micro-transactions	Less than \$0.001 per transaction
On-chain billing	Box Storage, unlimited, keyed by cycle
Typed interfaces	ARC-4 ABI, method selectors, structs
No L2 complexity	Single-layer settlement, no bridges
Community	AlgoBharat, strong India presence

Solana: higher failure rates, no Box Storage. Ethereum: L2 required for cost viability.

Scalability Vision

6 MONTHS 500 users / 2,000 vaults Mainnet + first Pro customers. AlgoBharat seeds 50 users, Telegram 5x referral loop, SEO indexed, MCP directory drives signups.	12 MONTHS 5,000 users / 100+ services MCP network effect activates. ServiceRegistry critical mass at 50+ listings. B2B pilot with 2-3 companies for employee subscriptions.	24 MONTHS Protocol Layer Third-party apps build on vault contracts. Unsubscribely becomes payment rails for autonomous recurring payments. x402 scales with ecosystem.
--	--	---

Competitive Moat

On-chain Portability Users own payment history permanently. No vendor lock-in.	MCP Network Effect More AI tools connecting = more value per tool = more joining.
First-mover Registry No other protocol offers agent-to-agent discovery on Algorand today.	Lifetime Pricing No churn. Once paid, users never leave. Anti-subscription by design.
